 Washington, DC 20007

**Patient:** Bella (20946)  
**Species:** Canine  
**Age:** 3 Yrs. 3 Mos.  
**Color:** White

**Breed:** Poodle, Miniature  
**Sex:** Female

Date	Type	Staff	History
9/8/2023	I	T	A few pets may experience some mild lethargy and soreness, or reduced appetite, from vaccinations. If this persists longer than 24 hours, please call our office. Anaphylactic reactions to vaccines occur within 1-2 hours of the vaccine and include difficulty breathing and severe swelling and itching. Adverse vaccine reactions that can occur within the first 24 hours after vaccination and include severe lethargy, diarrhea, vomiting, facial swelling, itchiness, or raised red wheals on the skin. If you notice any of these symptoms please call us immediately.
9/8/2023	I	T	Bordetella is a vaccination which protects your dog against kennel cough. This vaccination is recommended for dogs who may be exposed in a kennel, grooming parlor, dog show, or by hospitalization. It should be boosted every 6-9 months. One type is given in the nose, so some sneezing and even a reflexive "reverse sneeze" may happen for the next 12 hours. The injectable vaccine must be first given as 2 boosters 3 weeks apart, then every 9 months.

Date	Type	Staff	History
------	------	-------	---------

anxiety

T: unable to obtain- P gets upset easily

P: 100

R: pant

Heartworm/Flea-Tick Prevention: none

Diet: Merrick wet food 3rd of a can and 3rd of a cup of open farm grain free

V/S/C/D: twice in car and once bathroom; last week- hasn't this week -/-/- running stools on and off

Medications: Trazodone 50mg 1.5 tab 2x a day - O cut to one tablet

**PC/History:** P is here for an exam in advance of getting groomed. O states P has been having diarrhea since starting trazodone 8/31, which was Rx'd by vet at Banfield, where a Rabies vax was administered and dog had nails trimmed.

The stool is running after the second fecal of the day. O has only had P for two weeks and stools were fine before starting medication.

O is likely going to rehome dog - her anxiety and aggressive tendencies are not a good fit for owner. O's goal today is to focus on getting diarrhea under control.

Assistant Initials: JCM

### **SUBJECTIVE:**

#### **OBJECTIVE:**

EENT - No ocular discharge; PLRs + OU, direct and consensual; pupils equal size and responsive

No nasal discharge, nares of normal size and shape

Ears clean AU

ORAL: NP, dog won't allow

CV - Mucous membranes pink, moist. CRT <2sec. Normal sinus rhythm, no murmur ausculted. Femoral pulses s/s

RESP - Normal BVS. No crackles or wheezes ausculted. No cough elicited on tracheal palpation

GI - Abdomen soft and non-painful with no palpable masses

GU - WNL; **mammary development, recent litter, per owner**

MS - Ambulatory x all 4 limbs, no lameness, normal muscle mass

Peripheral LNs - WNL

INTEG - Soft, full furcoat with no evidence of ectoparasites or alopecia.

NEURO - Appropriate mentation. No deficits noted; no full neuro exam performed

RECTAL - NP

#### **ASSESSMENT:**

Anxiety, some aggressive tendencies

Diarrhea - likely secondary to trazodone use

Body Condition Score 4.5/ 9

------	------	-------	---------

**PLAN:**

Visbiome daily

Add some canned pumpkin to food

Decrease trazodone to 1/2 tablet PO BID, but ok to stop, esp if owner doesn't think it's having desired effect

*If owner does decide to keep dog, schedule an exam for wellness, vax, prev care, OVH, anxiety discussion*
